

Learn about 3D techniques in WEBGIS

Nguyen Van Dat

Abstract: This topic aims to research and evaluate 3D capabilities in WebGIS with the goal of developing a cartographic system that supports multi-dimensional spatial data display. Through the experimental process, the topic provides a solution for integrating 3D techniques into WebGIS to enhance service quality and user experience. The expected research results will contribute to the widespread dissemination and application of GIS technologies in the 21st century.
