

Building an online classifieds system for Thai Nguyen province

Mai Văn Ước

Abstract: This topic addresses the necessity and importance of building an online classifieds system in Thai Nguyen province, aiming to meet the demand for efficient buying and selling transactions between sellers and buyers. The research methodology includes practical analysis, identifying core system components, and deploying the application based on modern technology. The goal is to create a digital platform that enhances business transactions and promotes local economic development. The expected outcome is that building the system will provide a useful solution for the buying and selling market in Thai Nguyen province, contributing to the sustainable development of the locality.
