

Using Drupal to build a news website

Kim Thi Quynh Trang

Abstract: In the context of the rapid development of the internet, building an effective Content Management System (CMS) for news websites has become important. This topic proposes using Drupal as a CMS solution to build a professional and flexible news website. The goal is to implement the project using a combination of theoretical research and experimentation, aiming to create a system capable of managing diverse content and interacting well with end users. Through this, the topic expects to achieve technical and practical application contributions, while affirming the flexibility and ease of use of Drupal in the field of news website development.
