

Building a website for ordering office meals

Hoang Van Nghia

Abstract: In the context of the strong development of information technology and the increasing demand for convenience in time management, the Office Meal Ordering Website is proposed to solve the problem of improving work efficiency and saving time for employees. This project will focus on designing a professional website system that helps businesses easily order daily lunch services for their employees, while also supporting office meal providers in managing orders and food distribution. Through empirical research, this project aims to demonstrate the effectiveness and convenience of this new solution in the field of office meal management.
