

Build a website for Thai Nguyen Software Technology Center Joint Stock Company.

Vu Thi Anh

Abstract: In the context of the increasingly developing digital landscape, building an effective information management system through a website is necessary for Thai Nguyen Software Technology Center Joint Stock Company. This project aims to design and deploy a professional website to help the company optimize work processes and enhance its brand image. The research method is based on a combination of modern web administration principles with experimentation to build a user-friendly interface and an easy-to-manage content system. The expected result is a stable website that meets the needs of the business while providing information technology solutions for the local market.
