

Building a news website

Ta Van Ngoc

Abstract: In the context of increasingly widespread digitalization, building an effective news website has become an urgent requirement to attract and retain users. This project aims to design and implement a content management system (CMS) for a news website, enhancing user interaction and experience. The research methodology includes applying UI/UX principles, combined with modern front-end technologies such as React.js and back-end technologies like Node.js. The project hopes to contribute a practical solution to the fast and accurate information needs of the digital community.

Keywords: News website, CMS, user interface (UI/UX), front-end, back-end
