

Building a salary and personnel management program for Vietnam Software Development Research Joint Stock Company.

Tran Thi Hoa

Abstract: In the context of human resource and payroll management increasingly demanding efficiency and accuracy, this topic focuses on building a human resource and payroll management system for a software research and development joint stock company. The objective of the topic is to improve management processes through the automation of tasks related to human resources and payroll. The research methodology includes conducting a practical survey at the enterprise, analyzing the current system, and designing a solution based on the company's requirements. It is expected that the implementation of the topic will bring many benefits such as enhancing management capabilities, reducing errors in data processing, thereby improving the operational efficiency of the enterprise.
