

Building a mobile application to introduce the University of Information Technology and Communication.

Hoang Manh Tung

Abstract: In the context of the rapid development of information technology, building a mobile application to introduce the University of Information Technology and Communication plays an important role in raising community awareness about the school. The objective of this project is to design and implement a mobile application system to provide detailed information about the school, academic programs, internship and job opportunities. The research methodology includes both theoretical and empirical research to ensure suitability for the target users. The expected outcome is to create a useful tool that enhances access to and understanding of the University of Information Technology and Communication.

Keywords: Mobile application, university of information technology and communication, digital education
