

Research and deployment of MPLS-VPN technology for VMH Vietnam Trading and Communication Joint Stock Company

Nguyen Thu Thuy

Abstract: In the increasingly demanding business context of flexibility and security in data access, this topic focuses on researching and deploying an MPLS-VPN solution for VMH Vietnam Trading and Communication Joint Stock Company. The objective of the work is to build an effective virtual private network (MPLS-VPN) system to enhance security capabilities, optimize data transmission paths, and reduce operational costs. Through a combination of theoretical research and experimentation, the topic expects to achieve practical application results, contributing to the development of network technology for domestic enterprises.

Keywords: MPLS-VPN, virtual private network, data security, network optimization, media enterprise
