

Designing a scientific conference website for the University of Information and Communication Technology - Thai Nguyen University

Luong Dinh Long

Abstract: This is a Capstone Project aimed at designing a specialized website for organizing scientific conferences at the University of Information and Technology (UIT). With the goal of enhancing information delivery efficiency and user experience, the project combines theoretical research on UX/UI with practical implementation. Through the development process, the project is expected to contribute to modernizing conference organization activities within the information technology education system, while providing a practical application solution for UIT.
