

Building a VoIP solution for Hai Duong University.

Vu Thi Thanh Thuy

Abstract: In the context of rapidly developing information technology, using VoIP services to enhance management efficiency and internal communication at universities has become essential. This project aims to build a VoIP solution for Hai Duong University, helping to improve call quality, save costs, and increase work productivity. The research method combines VoIP theory with experimental system deployment at the university. The expected results will bring convenience in communication while contributing to improving the school's management efficiency.
