

Building a graduate admissions management program at the University of Economics and Business Administration on ASP.Net technology.

Tieu Van Tien

Abstract: This topic aims to overcome limitations in the postgraduate admission process at the University of Economics and Business Administration. The main objective of the research is to build an automated admission management system based on the ASP.Net platform, meeting the requirements of efficiency, transparency, and convenience for both the university and applicants. The research method combines practical analysis, system design, and trial deployment of new technology applications in the admission process. The expected result is an advanced technical solution that improves the quality of admission management while enhancing competitiveness in the education market.
