

Mobile application programming

Do Hoang Tung

Abstract: In the current era of rapid digital technology development, building mobile applications has become an essential need for many businesses and organizations. This topic aims to research and analyze trends in mobile application development, while also constructing an application system based on the Android platform. Through the experimental process, the topic applies modern programming techniques to ensure the efficiency and stability of the application. The expected results of this study not only provide users with a better application experience but also contribute to the development of mobile technology in general.

Keywords: Mobile programming, Android, Digital technology, Application trends
