

Building a bus map application for Thai Nguyen city on Android.

Nguyen Huu Hoat

Abstract: In the context of increasing demand for public transportation information, this project aims to develop a bus map application for Thai Nguyen City, helping residents easily look up routes and schedules of buses. Through a combination of theoretical research and experimentation on the Android platform, the project seeks to provide an effective technical solution to improve the local public transportation experience. This not only contributes to promoting the development of smart applications for urban traffic but also reflects the interest in leveraging technology to enhance the quality of life for residents.
