

Build a virtual booth simulation program for TIC Thai Nguyen computer company.

Do Huu Dung

Abstract: This topic aims to meet the need for building a virtual booth simulation system to support the online business of TIC Thai Nguyen Computer Company. Through theoretical research and experimental implementation, the topic will design and develop a booth simulation program with main functions such as product management, product information display, and online transactions. The expected results will contribute to improving business performance and expanding the company's sales network.

Keywords: Virtual booth simulation, online business, product management, transaction system, TIC Thai Nguyen Computer Company
