

Building a "task assignment" system for the information technology office using Microsoft SharePoint Server 2010.

Vu Hong Quan

Abstract: In the context of project and task management in an IT office that increasingly demands efficiency and automation, this topic focuses on building a task assignment system based on Microsoft SharePoint Server 2010. The main objective is to develop a solution that enables effective task assignment and progress tracking. The research methodology includes needs analysis, system design, and deployment. The expected outcomes of this topic not only help improve teamwork capabilities but also enhance the quality of project management in the IT office.

Keywords: Microsoft SharePoint Server 2010, Project Management, Information Technology
