

Building a resource management system for But Son - Ha Nam Cement Company using Microsoft SharePoint Server 2010 technology.

Hoang Van Thai

Abstract: The research aims to meet the requirement of optimizing resource management in the production activities of But Son - Ha Nam Cement Company. Through analyzing the current situation, the project identifies the goal of designing and deploying a resource management system based on Microsoft SharePoint Server 2010. The research methodology includes both theoretical aspects of corporate resource management and experimentation with technological solutions. The expected outcome is the improvement of work efficiency and reduction of risks in operational processes, contributing to the sustainable development of the enterprise.
