

# Verification of the Web application model

Vu Thi Tuyen

**Abstract:** In the context of increasingly rapid and complex information technology development, this topic focuses on verifying web application models. The main objective of the research is to determine the effectiveness and scalability of web application solutions in practice. Through a combination of theoretical and experimental methods, the topic will evaluate the technical characteristics and commercial benefits of modern web application models. The expected results will provide valuable insights into how to optimize performance and information security during the deployment of web applications.

**Keywords:** Verification, Web Application Model, Information Technology, Experimentation, Information Security
