

Learn about website security issues, security testing methods, and security testing of a web application.

Than Thi Ly

Abstract: In the context of the increasing risk of cyber attacks on website systems, this study aims to explore modern website security issues. Through this, the topic will identify effective testing methods to ensure the security of web applications. The approach includes theoretical analysis and experimentation on a specific web application sample. The results of this study are expected to provide useful solutions for developers and website administrators, as well as make a significant contribution to the field of network security.
