

Building an English learning application on Windows 8

Luyen Huy Duong

Abstract: In the context of the increasing demand for international communication through the English language, building an English learning application on the Windows 8 operating system is of significant importance. The objective of the project is to develop an electronic application that supports effective vocabulary, grammar, and communication learning for users. The research method applies linguistic theory combined with experimentation to optimize the learning experience. It is expected that the application will make a significant contribution to the digital education ecosystem and enhance the English proficiency of the Windows 8 user community.

Keywords: English learning application, Windows 8 operating system, Digital education
