

Building a driving license practice application for cars on the Android operating system for mobile devices.

Bui Tien Dat

Abstract: In the context of increasing demand for learning and practicing driving skills, this topic focuses on building a car driving test preparation application on the Android operating system platform. The objective of the research is to develop an effective support system for learners through theoretical and practical tests. The research method is based on a combination of automated learning materials and direct testing on mobile devices. The topic is expected to provide a useful tool, while contributing to improving the quality of driver education and training.

Keywords: Android application, Driving license practice, Operating system, Driving skill education
