

Building an online auction management system

Bui Truong Giang

Abstract: In the context of a rapidly developing digital economy, the issue of managing online auctions has become more important than ever. This topic focuses on building an online auction management system to address existing challenges in this field. Through a combination of theoretical research and experimental implementation, the topic aims to provide a comprehensive and effective solution for businesses and individuals. The results of the topic not only confirm the feasibility of the system but also make a significant contribution to the development of auction management technology in the digital era.
