

Learn about Google Maps API and apply it to build an Android application.

Do Thi Kim Thoa

Abstract: This topic aims to thoroughly explore the Google Maps API, driven by the necessity of this tool in practice. Through this, the research approaches solving the problem of building a mobile application for the Android platform by applying features from the Google Maps API. The research method combines theory and experimentation to ensure a deep understanding of the API's functionality as well as the application deployment process. The significance of the topic lies in providing students with basic knowledge on how to use Google Maps in mobile application development, while also contributing to the field of information technology.
