

Building an Explorer application on mobile phones

Nguyen Huu Minh

Abstract: In the context of rapidly developing information technology and the increasing demand for mobile applications, this topic focuses on building an Explore application for mobile phones. The project aims to develop a mobile system that supports users in searching for geographical and travel information more efficiently. The research method combines both theoretical academic approaches with experimentation to ensure the comprehensiveness of the application. Through the implementation of the application, the topic hopes to contribute to the field of mobile technology and provide useful solutions for the community.

Keywords: Mobile application, Geographic technology, Software development
