

Building an online project management support tool

Do Van Chien

Abstract: In the context of increasingly advanced digitalization, effective project management through online platforms has become an urgent requirement. This topic aims to build an online project management support system to optimize synchronized workflows for teams in various fields. Through research, the topic will apply a combination of theoretical and experimental methods to develop the tool. The ultimate goal is to create a technical solution that can be widely applied to improve performance and flexibility in project management.

Keywords: Online project management, support system, digital tools, digitalization context
