

Building a trading website within the member universities of Thai Nguyen University.

Bui Thi Hong Trang

Abstract: In the modern context, building a transaction website for member universities of Thai Nguyen University plays an important role in leveraging information technology to effectively serve educational and management activities. This project aims to develop a website system with functions for exchanging information between the university, lecturers, and students, while also creating an effective internal transaction platform. The research methodology includes analyzing business requirements, technical design, and deploying a practical application. The expected outcome is to provide a useful solution for management and learning activities at universities, contributing to improving educational quality and administrative efficiency.
