

Learn about PHP and build an online auction website.

Hoang Xuan Trong

Abstract: In the context of business increasingly shifting to the digital environment, researching and applying PHP technology to build an online auction website system has become an urgent need. The objective of this project is to develop a web platform capable of supporting users in performing operations such as logging in, managing accounts, creating listings, participating in auctions, and making payments. Through theoretical research on PHP along with application implementation, the project aims to solve the problem of improving efficiency in online buying and selling activities. The expected outcome of this project is to provide a robust, easy-to-use web system that meets the demands of the modern market.
