

Building an information lookup program via text messages at Phuc Thuan I Primary School

Liu Xunchun

Abstract: In the current context, efficient access and management of information play a crucial role in educational activities. This topic aims to address the issue of the lack of convenient information retrieval channels at Phuc Thuan I Primary School. The objective of the research is to build an application system based on text messages that allows teachers and students to easily access necessary information, thereby improving the effectiveness of teaching and learning. The method combines theoretical research on information management with practical software deployment. The system is expected to provide important functions such as checking class schedules, grades, and quickly updating news from the school to parents, contributing to improving the quality of education at the institution.

Keywords: Searching for information via messages, education management, mobile application, notification system, primary education.
