

Build an e-commerce website using web programming languages HTML5, CSS3, PHP & MySQL. Use responsive techniques.

Tran Trung Tuyen

Abstract: In the context of the increasing growth of e-commerce transactions, this topic focuses on building a complete e-commerce website system using the web programming languages HTML5, CSS3, and PHP combined with a MySQL database. The application of Responsive techniques ensures the website is compatible with various devices, meeting the needs of modern users. This topic not only addresses the problem of creating a smooth interface for end users but also provides a solid platform for data management and performing basic e-commerce functions. Through the implementation of the application, the goal of this topic is to create a user-friendly, easy-to-use system that can be expanded in the future.

Keywords: e-commerce, HTML5, PHP & MySQL, Responsive Web Design
