

Applying object-oriented analysis and design method to design and build a staff record management system for the University of Information and Communication Technology - Thai Nguyen.

Nguyen Hai Yen

Abstract: In the current context, managing staff records at the University of Information and Communication Technology - Thai Nguyen is facing many challenges regarding efficiency and accuracy. This thesis aims to solve this problem by applying the object-oriented analysis and design method. The goal is to build an effective staff record management system to improve the quality of human resource management. Through a combination of theoretical research and experimentation, the thesis hopes to contribute to the field of intelligent human resource management and enhance the university's competitiveness.
