

Research on 3D model rendering techniques in the Web environment and their applications

Pham Thi Hong Nhung

Abstract: This topic aims to research 3D model display techniques in a Web environment for the purpose of developing practical application solutions. During implementation, the topic will combine theory with experimentation to build an effective system. The deployment of this technology is expected to bring convenience and high performance to users, while making an important contribution to the development of Web 3D technology.

Keywords: 3D display technology, Web environment, practical applications, Web 3D technology, technological solutions
