

Application of GIS in administrative site management in Vinh Phuc province

Nguyen Thi Huong

Abstract: In the current context, the application of GIS (Geographic Information System) to effectively manage administrative locations in Vinh Phuc province is becoming increasingly important. This study aims to build a geographic information management system (GIS) for Vinh Phuc province with the goal of optimizing management processes and supporting administrative operations. The research method is based on a combination of practical analysis and the implementation of GIS applications in reality. Through this, the study not only contributes to improving the efficiency of administrative location management but also brings significant practical value to administrative management work in Vinh Phuc province.
