

Online transaction security solution in the Mua360 e-commerce platform

Tran Duc Hong

Abstract: In the context of the strong digitalization of the economy, security issues in online transactions have become urgent, especially for e-commerce platforms like Mua360. This topic aims to build a comprehensive security system for transactions on Mua360 by analyzing and selecting the most modern measures. The research method combines both theory and experimentation to ensure the effectiveness of the solution. The project hopes to provide a flexible solution that meets the security needs of businesses and users, making a significant contribution to the field of e-commerce information security.
