Building a cash accounting program at Que Vo District General Hospital

Nguyen Thi Phuong

Abstract: This topic aims to propose an effective cash accounting management system for Que Vo District General Hospital. Based on the current unstable financial management situation, the problem is to build a technological solution to improve the situation. Through theoretical research combined with practical application deployment methods, the topic hopes to contribute an advanced and easy-to-use financial management system to the healthcare sector. The expected results will confirm the effectiveness of this solution in improving the quality of medical services.

Keywords: cash accounting, general hospital, financial management, applied technology, management system
