

Building a payroll accounting program for Quang Ninh College of Industry and Construction.

Tran Thi Thu Trang

Abstract: In the context of increasingly specialized financial management, building an effective payroll accounting system at Industrial and Construction Colleges is an urgent need. This topic aims to develop an automated calculation program to optimize the payroll management process, thereby enhancing labor productivity and minimizing errors. The research method combines analyzing practical requirements with implementing technology applications to build a suitable solution. The expected result is a system that helps the school manage labor costs more effectively, while providing useful information for financial and business decision-making.
