

Building a management system for money transfer letters and money transfer telegrams for Thai Nguyen Provincial Post Office.

Nguyen Quang Hai

Abstract: In the context of information technology development, building a management system for money transfer orders and telegraphic money transfers is necessary to enhance the operational efficiency of Thai Nguyen Provincial Post Office. This topic focuses on the goal of improving the processing and tracking of money transfer transactions by applying modern technical solutions. The research method is based on a combination of analyzing real-world requirements with the design and deployment of an automation system. The expected result is a flexible and efficient system that improves the transaction processing capacity of the local post office, while contributing to the digitalization process of the postal and telecommunications sector.
