

Customer information security solutions in E-commerce

Nguyen Van Sau

Abstract: In the context of a rapidly developing digital economy, the issue of customer information security has become an urgent requirement for e-commerce businesses. This topic aims to research and build information security solutions for e-commerce systems. Through a process of theoretical analysis combined with experimentation, the topic will assess current security risks and propose effective protection measures. The results of the topic are expected to provide a solid technical foundation to ensure information security for customers, contributing to enhancing reputation and sustainable development for businesses.

Keywords: cybersecurity, e-commerce, risk management
