

Research on authentication in online transactions and application of building a classifieds website for EBG Company - BAC GIANG

Nguyen Van Long

Abstract: This topic focuses on researching and proposing secure authentication measures in online transactions to ensure security and trust between buyers and sellers. The objective of the work is to build a multi-factor authentication system for the classifieds website EBG Bac Giang, meeting the requirements of protecting personal information and user accounts. By applying theoretical research methods combined with practical implementation on a web platform, the topic aims to contribute a useful solution to the e-commerce industry in Vietnam.

Keywords: Online authentication, Transaction security, Classified ads website, EBG Bac Giang, Authentication system
