

Online payment solution with e-wallet for the phone top-up card selling website of Loan Luc store.

Hoang Huong Quynh

Abstract: In the context of increasingly widespread digitalization, the adoption of online payment via e-wallets on phone top-up card selling websites has become essential. This project aims to build a safe and convenient payment system for customers at the Loan Luc store. Through theoretical research combined with experimentation, the project will propose technical solutions to implement e-wallet applications on the top-up card selling website. It is expected that the implementation of this system will bring many benefits in terms of management and service for the business, while providing a more convenient shopping experience for customers.
