

Building a deposit transaction management information system at AGRIBANK branch in Hiep Hoa district, Bac Giang province

Nguyen Tuan Duong

Abstract: This topic aims to build and deploy an efficient deposit transaction management information system for Agribank Bank, Hiep Hoa District Branch, Bac Giang Province. The research proposes solutions based on modern technologies combined with actual banking business practices to enhance management capacity and improve customer service quality. The implementation process includes requirements analysis, system design, deployment, and testing. Expected results will bring significant improvements to the deposit transaction process, while providing a solid technological foundation for other management activities of the bank.

Keywords: information system, transaction management, Agribank, modern technology, bank management
