

Building a loan management information system at AGRIBANK branch in Dai Tu district, Thai Nguyen province.

Tran Thi Lan Huong

Abstract: In the context of an increasingly developing economy, effective loan management has become an urgent requirement for credit institutions such as AGRIBANK. This study aims to build a loan management information system at the Dai Tu district branch in Thai Nguyen province of AGRIBANK. Through the research process, the study will combine theoretical and empirical methodologies to assess the current state of loan management, thereby proposing solutions to optimize this process. The expected outcome is an advanced information system that enhances risk management capabilities and improves the business performance of the bank.
