

Building a fixed asset management program at the Technology Information Center - Thai Nguyen Department of Science and Technology.

An Bao Yen

Abstract: This topic aims to address the issue of fixed asset management efficiency at the Center for Information Technology - Department of Science and Technology of Thai Nguyen province through the development of a management system. The objective of the research is to develop an intelligent solution to optimize the process of tracking, monitoring, and managing assets. The research methodology includes analyzing actual needs, designing a user-friendly interface, and implementing an application for testing and adjusting the system. The expected outcome of this topic is an effective management system that will improve work productivity at the center, while providing a foundation for the sustainable development of asset management activities in the future.
