

Building an online e-commerce system for Synergix Technology software company.

Nguyen Thi Anh Tuyet

Abstract: In the increasingly developing context of digitalization and globalization, building an online e-commerce system is extremely necessary to enhance the competitiveness of Synergix Technology software company. The objective of this project is to research and design an effective e-commerce solution that fully meets the requirements for online transactions, secure payments, and product information management. Through the process of implementing a real-world application, the project hopes to deliver a comprehensive solution that helps Synergix Technology expand its business and provide a positive shopping experience for customers.
