

Research on online payment methods and application for building a mobile phone sales website

Nguyen Thanh Tung

Abstract: In the context of the strong development of e-commerce, research on online payment methods has become urgent. This topic focuses on analyzing popular payment methods and selecting suitable solutions for sales websites. The goal is to build a secure, convenient, and efficient online payment system to serve e-commerce activities. The research method combines theory with experimentation to ensure the system's applicability. The expected result is to provide a technical solution that can be widely applied in e-commerce projects, contributing to the development of the online sales industry.
