

Research on 4G network access technology

Ngo Quang Huan

Abstract: In the information age, research and development of 4G network access technology has become an important requirement to meet users' demand for fast and stable connectivity. This topic aims to conduct an in-depth analysis of modern 4G access methods and propose solutions for optimizing network performance. Through theoretical research and experimental deployment, this work hopes to provide the technology community with new knowledge and useful solutions for improving the quality of 4G network services.
