

Evaluation of some techniques in analog television and digital television

Vu Van Thuc

Abstract: In the context of the rapid development of communication technology, this topic aims to evaluate and compare modern techniques in analog television and digital television. The objective is to identify the advantages and disadvantages of each technique to support appropriate selection for transmission systems. The research method combines theory with experimentation, aiming to provide useful information on practical application prospects. The expected results will offer valuable recommendations for the television industry.

Keywords: Analog television, Digital television, Transmission technology, Technical comparison, System selection
