

Testing and quality assessment in IPTV

Dao Thi Hieu

Abstract: In the context of the rapid development of IPTV technology, measuring and evaluating service quality plays an important role in ensuring a good user experience. This topic aims to research modern testing methods and build an effective IPTV quality assessment system. The approach includes both theory on data transmission techniques and practical application deployment. The expected results provide useful solutions for the IPTV industry, contributing to improving service quality and meeting the growing market demand.

Keywords: IPTV, quality testing, service evaluation
