

Design of an automatic podium system

Nguyen Van Canh

Abstract: In today's digital age, organizing events is increasingly necessary and costly in terms of human resources and expenses. This topic focuses on designing an automatic podium system to meet this need. The objective of the research is to build a system that supports users in managing and organizing presentations, from scheduling to the automatic speech process. The research method is based on a combination of natural language processing techniques and artificial intelligence technology to automate the steps in the speech process. The expected result is a flexible, easy-to-use system that optimizes the event organization process while ensuring professionalism and efficiency.

Keywords: Automatic podium system, natural language processing, artificial intelligence
