

Research on NFC technology and its applications

Do Van Tuan

Abstract: This topic aims to study Near Field Communication (NFC) technology and its practical applications in modern society, including both theoretical and experimental aspects. The project will analyze current issues related to NFC adoption and propose technical solutions to improve the performance and security of NFC systems. The expected outcome is a detailed report on the broad application potential of this technology, contributing to sustainable development in the field of mobile communications.

Keywords: NFC, practical applications, technology research, mobile communication, system security
