

Information security in Wifi

Chu Duc Quyen

Abstract: In the context of the widespread application of WiFi wireless networks, information security issues are becoming more urgent than ever. This topic aims to research modern security methods for WiFi systems and develop a practical implementation solution. Through a combination of theoretical research and applied experiments, the thesis will propose effective measures to enhance the security of WiFi networks. The expected results will provide a deep understanding of Wi-Fi security and contribute to the development of sustainable wireless network systems.
